PROFESSIONAL SUMMARY

- Electronics and Communication Engineering graduate with a strong foundation in Python programming and object-oriented concepts. Experienced in building small-scale applications, working with file handling, and data processing. Eager to contribute to entry-level Python developer roles and grow in a professional software development environment.

SKILLS

- **Programming:** Python (Core, OOP), Basic Data Structures
- **Python Concepts:** File Handling, Exception Handling, Modules, Debugging
- **Libraries:** Pandas, NumPy, Requests
- **Web Basics:** REST APIs, JSON Handling
- **Databases:** MySQL, SQL (Joins, Subqueries)
- **Tools:** Git, GitHub, VS Code, Jupyter Notebook

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering	2021–2025
CIET, Guntur	CGPA: 6.61/10.0
Senior Secondary Class XII	2019–2021
Sri Chaitanya Junior College	59.40%
Secondary Class X	2019
State Board of Andhra Pradesh	82%

PROJECTS

- **Web Scraper and Data Export Tool** Jan 2026 – Feb 2026
Python, BeautifulSoup, Requests, Pandas GitHub
 - Developed a web scraping tool to extract structured data such as titles, prices, and links from web pages.
 - Used BeautifulSoup to parse HTML elements and navigate through tags to retrieve required information.
 - Automated data collection across multiple pages by implementing pagination handling.
 - Cleaned and structured the extracted data using Pandas for better usability.
 - Exported the processed data into CSV format for storage and further analysis.
 - Implemented error handling for HTTP request failures and missing HTML elements.
 - Optimized scraping performance by reducing redundant requests and improving parsing logic.
- **File Organizer Automation Tool** Feb 2026 – Mar 2026
Python, OS Module GitHub
 - Developed a Python script to automatically organize files into folders based on file type.
 - Categorized files such as images, documents, and videos using file extensions.
 - Used OS module to perform file operations like moving and renaming files.
 - Reduced manual effort by automating file management tasks.
- **Diabetes Prediction System** Jan 2026 – Mar 2026
Python, Pandas, Scikit-learn GitHub
 - Built a machine learning model to predict whether a person has diabetes based on medical input features such as glucose level and BMI.
 - Performed data cleaning and preprocessing by handling missing values and preparing the dataset for model training.
 - Used pandas and NumPy libraries for data manipulation, analysis, and efficient handling of medical data.
 - Applied Logistic Regression algorithm to perform binary classification for predicting diabetes outcome.
 - Divided the dataset into training and testing sets to evaluate the model performance on unseen data.
 - Evaluated model accuracy and used confusion matrix to understand correct and incorrect predictions.
 - Applied feature scaling techniques to normalize the data and improve model performance.
 - Analyzed relationships between different features using basic exploratory data analysis techniques.

CERTIFICATIONS

- **Meta**, GenAI in Data Analytics 2025
- **Infosys Springboard**, Python Programming 2025
- **HackerRank**, SQL (Basic)
- **HackerRank**, Python (Basic)
