PROFESSIONAL SUMMARY

- Data-driven graduate with hands-on experience in data analysis and basic machine learning using Python, SQL, Excel, and Power BI. Skilled in data cleaning, exploratory data analysis (EDA), and dashboard reporting to derive actionable insights. Experienced in building end-to-end analytical solutions and supporting data-driven decision-making. Seeking entry-level roles in Data Analytics or Data Science.

SKILLS

- **Data Analysis:** Data Cleaning, Exploratory Data Analysis (EDA), Data Preprocessing, Feature Engineering, Trend Analysis
- **Data Visualization & Reporting:** Excel (Pivot Tables, VLOOKUP), Power BI (Basic), Matplotlib, Seaborn
- **Programming & Querying:** Python, SQL
- **Machine Learning:** Logistic Regression, Classification, Model Evaluation, Basic Clustering
- **Databases:** MySQL (Joins, Subqueries)
- **Tools:** Git, GitHub, Jupyter Notebook, VS Code

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering	2021–2025
CIET, Guntur	CGPA: 6.61/10.0
Senior Secondary Class XII	2019–2021
Sri Chaitanya Junior College	59.40%
Secondary Class X	2019
State Board of Andhra Pradesh	82%

PROJECTS

- **Fraud Detection System** Jan 2026 – Feb 2026
Python, Pandas, Scikit-learn, Streamlit GitHub
 - Performed exploratory data analysis on financial transaction data to identify patterns and anomalies in transaction behavior.
 - Generated insights indicating higher fraud probability in specific transaction patterns, supporting better risk identification.
 - Cleaned and processed structured datasets using Pandas and NumPy to ensure data quality and consistency.
 - Identified key trends related to fraudulent activities based on transaction amount, balance differences, and transaction types.
 - Developed a classification model using Logistic Regression to detect fraudulent transactions.
 - Evaluated model performance using accuracy and confusion matrix to assess prediction effectiveness.
 - Built an interactive Streamlit dashboard to visualize predictions and support decision-making.
- **Diabetes Prediction System** Feb 2026 – Mar 2026
Python, Pandas, Scikit-learn GitHub
 - Conducted exploratory data analysis to understand relationships between medical features such as glucose level, BMI, and diabetes outcome.
 - Performed data cleaning and preprocessing to handle missing values and improve dataset quality.
 - Identified key health indicators contributing to diabetes risk through feature analysis.
 - Built a classification model using Logistic Regression to predict diabetes outcomes.
 - Evaluated model performance and interpreted results using confusion matrix and accuracy metrics.
 - Applied feature scaling techniques to improve model efficiency and consistency.
- **Sales Data Analysis Dashboard** Mar 2026 – Apr 2026
Excel, Power BI (Basic), SQL
 - Analyzed sales dataset to identify trends in revenue, customer behavior, and product performance.
 - Created interactive dashboards using Excel/Power BI to visualize key metrics such as total sales, region-wise performance, and monthly trends.
 - Identified key business trends such as top-performing regions and declining product categories to support strategic decision-making.
 - Generated actionable insights to support business decision-making by identifying high-performing products and underperforming regions.
 - Used SQL queries to extract and manipulate data for analysis.
 - Improved reporting efficiency by organizing and structuring data for better decision-making.

CERTIFICATIONS

- **Meta**, GenAI in Data Analytics 2025
- **Infosys Springboard**, Python Programming 2025
- **HackerRank**, SQL (Basic)
- **HackerRank**, Python (Basic)
